

- 1) Picture/text to represent account info
- 2) Brings you to the create schedule screen
- 3) A look at previous schedules
- 4) A look at all the courses in the curriculum
- 5) A place to include a funny experiment (time permitting)
- 6) A little about us and the app itself

Purpose of Screen: This is not entirely a screen; it works as a very nice feature to the app for convenience. A popular tool we noticed on many Android apps was a slide bar which had options to choose through many different categories of sorts. MyState is one app we identified that integrates the sidebar. Since we want to have this as a potential integration to MyState, we thought it would be a good use of time to use similar tools.

- 1) Since we log into an ISU account, we want whoever is using the app to know what account they are logged into. A simple picture and/or showing of the email address would be enough.
- 2) The ability to create a schedule is the main functionality of the app. It makes sense to have it on the sidebar.
- 3) A user should be able to look back at any previous schedule they have made. This would hold all the user's previous schedules.
- 4) This would bring the user to a large database of all the courses in case they wanted to look at any of the courses individually.
- 5) This is more of a potential gimmick. We have joked about placing an hidden feature in the app. This may or may not just be a tab. Hidden feature will be for our own enjoyment.
- 6) This tab brings us to the page about the app. This is so the users know who created the app and what its purpose is.
